Empowering Every Team with Safe, Scalable, and Governed AI Agents

SOLUTION BRIEF

Control Plane as a Service

Your IP. Your Brand. Our Agentic Infrastructure.

THE PROBLEM

Your clients expect AI agents on top of your platform. Building the agentic layer yourself means:

- 6 to 18 months of engineering time
- \$800K to \$2M+ in build cost
- Your best engineers diverted from your core IP
- Missing the market window while competitors ship

THE SOLUTION

Next Moca AgentOS is the control plane that runs, governs, and audits AI agents in production.

You bring the domain expertise. We run the control plane. Your clients see your product.

AgentOS connects to your systems via API, consuming only the curated outputs you choose to surface. Your proprietary models, training data, and core IP never leave your infrastructure.

WHAT AGENTOS DELIVERS

White-Label Deployment Your brand. Your UX. AgentOS runs behind the scenes. Private cloud, VPC, or on-premises.	System of Record Immutable logs, full versioning, lineage tracking. Audit evidence that accelerates enterprise procurement.	Governance + Security RBAC, secrets vault, OAuth/SSO, multi-tenant isolation, policy enforcement at execution.
Multi-LLM: No Lock-In Route across OpenAI, Anthropic, Gemini, or self-hosted. Swap models without rebuilding.	Intent to Agent / Workflow Natural language intent becomes a governed, production-ready agent or multi-step workflow in minutes.	Instant Agent Clone Scale from one golden agent to thousands of tailored instances with full governance maintained.

Three patent-pending capabilities no competitor replicates.

Enterprise DNA with Gated Promotion prevents LLM hallucination contamination. Run Intelligence captures failure signatures so agents learn from their own history. The combined DNA + Run Intelligence prompt injection compounds in value over time. Architectural decisions, not features.

IN PRACTICE

Aurivio

Ex-Amazon and Microsoft founders. Proprietary customer data science, predictive modeling, H3 geospatial intelligence, and CRM automation.

Challenge: clients demanded AI-agent experiences on top of their intelligence platform. Building internally would have diverted their data science team from their core IP.

BUILD VS. PARTNER

	Build	AgentOS
Time to client	12-18 mo	2-4 wks
Eng. cost	\$800K+	Fee only
Core team	Distracted	Focused
LLM choice	Locked	Any model

Result: Aurivio deploys a white-labeled agentic interface powered by AgentOS. Clients see an Aurivio product. Their models never leave their infrastructure.

TYPICAL USE CASES

- Proprietary domain IP with enterprise clients
- Engineering team focused on core product
- Need to ship an agentic product in under 90 days
- White-label: clients buy from you, not from us

Governance	Build it	Day one
Next feature	Months	Config only

TIME TO VALUE

- Week 1-2: Discovery and integration mapping
- Week 2-3: White-label environment provisioned
- Week 3-4: QA and deployment sign-off
- Day 30: Live branded product with your clients

Ready to ship your agentic product?

30-minute discovery call. Live deployment in under 30 days.
